... etc. went through all of the game settings and audio settings and everything looked good to me. Then I got to the credits and couldn't get past it. It wouldn't go any further and it locked up the PC. The only way to get past it was to hit the reset button. Everything else seems to be ok though. I've been able to get past it on other games but nothing has fixed it yet for that game. Anyone had this happen?  
A: There is a known issue where the audio won't work with PlayStation 3 games running on PC. The quick workaround is to set the audio to "Auto" and then use the Control Panel to turn it on and off manually until the game is fully up and running. Alternatively, if you are playing GTA Vice City and you don't need the sound, you can use something like Battle.net (I use it to play WoW).  
Q: Will my new gardenia be a shrub or a tree? So the other day, I bought my first ever plant from a place. The package says it's a gardenia, but I'm having a hard time telling if it's a shrub or a tree. If it's a tree, what kind of tree is it? There are two types of gardenias, the evergreen and deciduous types. The evergreen types are the familiar type, that flower throughout the year and can be hard to spot in the spring, as well as the summer and into the fall. They are known as deciduous for the leaf shedding in winter. However, gardenias are not always labeled as deciduous or evergreen, so you should know what you are buying before planting. You may also see the term hardy, and gardenias are not hardy. Gardenias are best planted in full sun. The type I bought came in a pot that was small. I would suggest giving it a good work out and repotting into a larger pot. It should grow well for several years, and continue to get larger as long as you can water it. When gardening, take advantage of the season, and cut it back in the spring. It may die back for a few weeks or a few months, depending on the type you bought, but will start sprouting in the spring as soon as it's warm enough to start the process.
